

Split settlement Market Practice

Disclaimer

The Securities Market Practice Group is a group of experts who devote their time on a voluntary basis to define global and local market practices for the benefit of the securities industry. The market practice documentation and recommendations produced by this organization are intended to solve common problems across the securities industry, from which financial institutions can derive clear benefits, to harmonize business processes and to facilitate the usage of message protocols ISO 15022 and ISO 20022. While the Securities Market Practice Group encourages the implementation of the market practices it develops, it is up to the financial institutions within each market to implement the market practices according to their needs and agreements with their business counterparts to support their businesses as efficient as possible.

I. Scope and definitions:

The scope of this document is to define a market practice for the instruction of a split settlement in those markets where split settlement is allowed.

Split terminology is often different from one country to another.

- Split settlement sometimes means “cash/securities split settlement”, ie, when cash and securities settle in different locations. This process is not covered by this practice but in the Cash-Securities split settlement MP available on www.smpg.info.

- Split and partial settlements terms are sometimes used for the same process. It is proposed to distinguish between the two processes as follows:

- Split settlement consists (**for an instructing (splitting) party**) in requesting the replacement of an existing instruction by two or more instructions. This is typically done by CSD participants (unilaterally or bilaterally) to, for example, enable the settlement of a client instruction that is short.
 - Bilateral splitting is when both parties to a trade must instruct and match for a split to take place. This happens for example in Switzerland.
 - Unilateral splitting is when only one party instructs the split. This happens for example in the UK.
- Partial settlement consists (**for an executing party**) in reshaping one instruction to allow settlement in multiple phases (eg, 5000 on day 1, 10000 on day 2...) until the original settlement instruction is fully settled. This without the need for any instructions from anybody to indicate the shapes to be settled (see Partial Settlement MP).

Preliminary remark

There is no major differences between the practices for bilateral and unilateral splitting except that for bilateral, both parties to a trade needs to instruct while in unilateral splitting, only one party instructs.

II. Actors and roles

Three roles are involved in this process:

1. Client of Instructing (“splitting”) Party

The party having instructed the original transaction on which a split is performed.

2. Instructing (“splitting”) Party

The party instructing the split.

3. Executing Party

The party executing the split instruction.

The actors that would typically play those roles are:

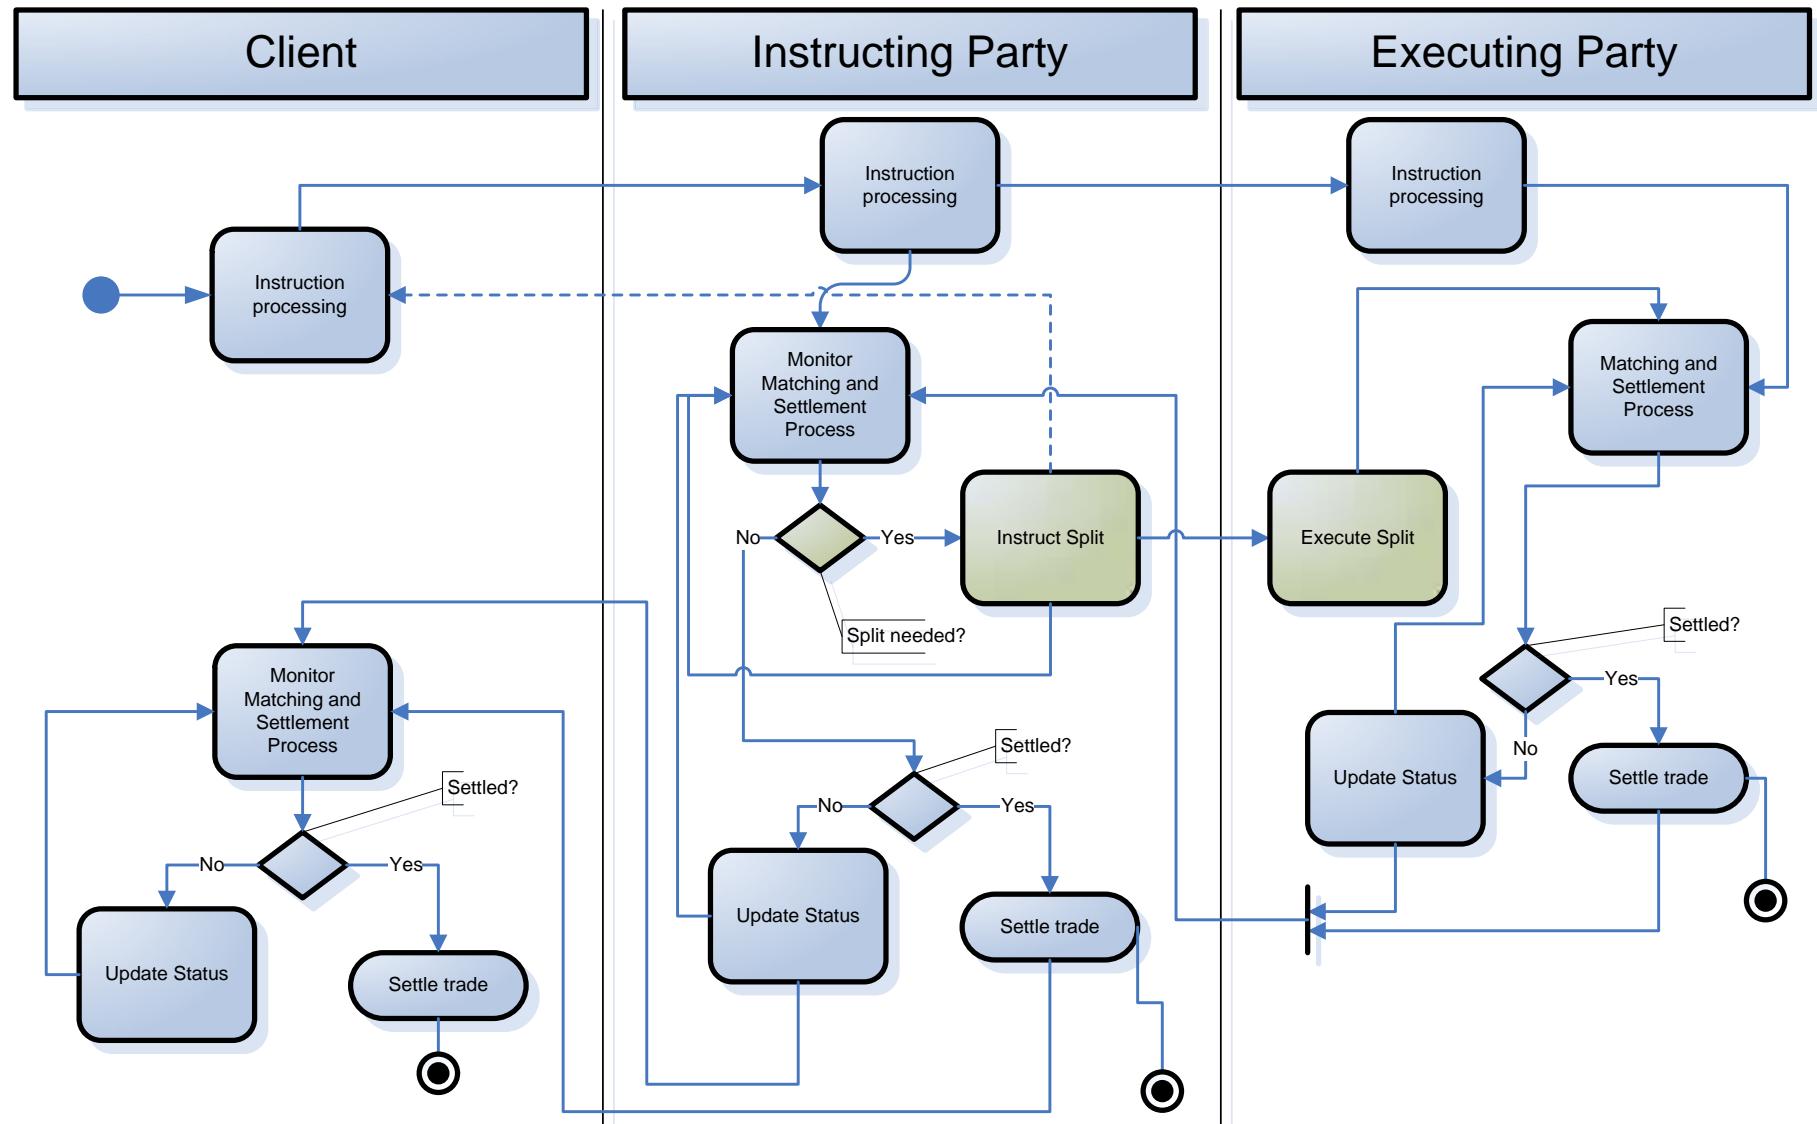

Client of Instructing (“splitting”) Party	Instructing (“splitting”) Party	Executing Party
Any party that can be client of a CSD participant (eg, investment manager).	Central Securities Depository (CSD) Participant (eg, custodian).	Central Securities Depository (CSD)

III. Activity diagram

The below activity diagram represents that activities on one side of the trade.

- For bilateral splitting, the same activities will be performed by the other side of the trade.
- For unilateral splitting, the same activities will NOT be performed by the other side of the trade.

Split settlement MP

Descriptions of the activities		
Client	Instructing Party	Executing Party
Instruction processing: Activity that will be at the origin of the existence of the original instruction that will need to be split. This activity is not described here as it is not the focus of this MP.		
	Monitor matching and settlement process. This activity is not described in detail here. Applies to all instructions.	Matching and settlement process: Not described in details here.
	Split needed YES/NO: If YES, ie, a pending instruction need to be split, the next step is the instruct split activity. If NO, the go to settled or not.	
	Instruct split: Instruction of the split on a pending instruction. The split may be reported to the client. It is to be noted that an instruction resulting from the split could be split itself, etc.	Execute split: Execution of the split. The internal process performed to execute the split may differ from one system to another. It is not important as long as the communication regarding the split is harmonised.
Monitor matching and settlement process. This activity is not described in detail here. Applies to all instructions, resulting from a split or not.		Matching and settlement process. This activity is not described in detail here. Applies to all instructions, resulting from a split or not.
Settled NO/YES: If NO, go to update status activity. If YES, go to settle trade activity. Applies to all instructions, resulting from a split or not.		
Update status: Update status (and inform about it). Applies to all instructions, resulting from a split or not.		
Settle instruction: Settle the instruction in the custody system. Applies to all instructions, resulting from a split or not.		

IV. Sequence Diagrams:

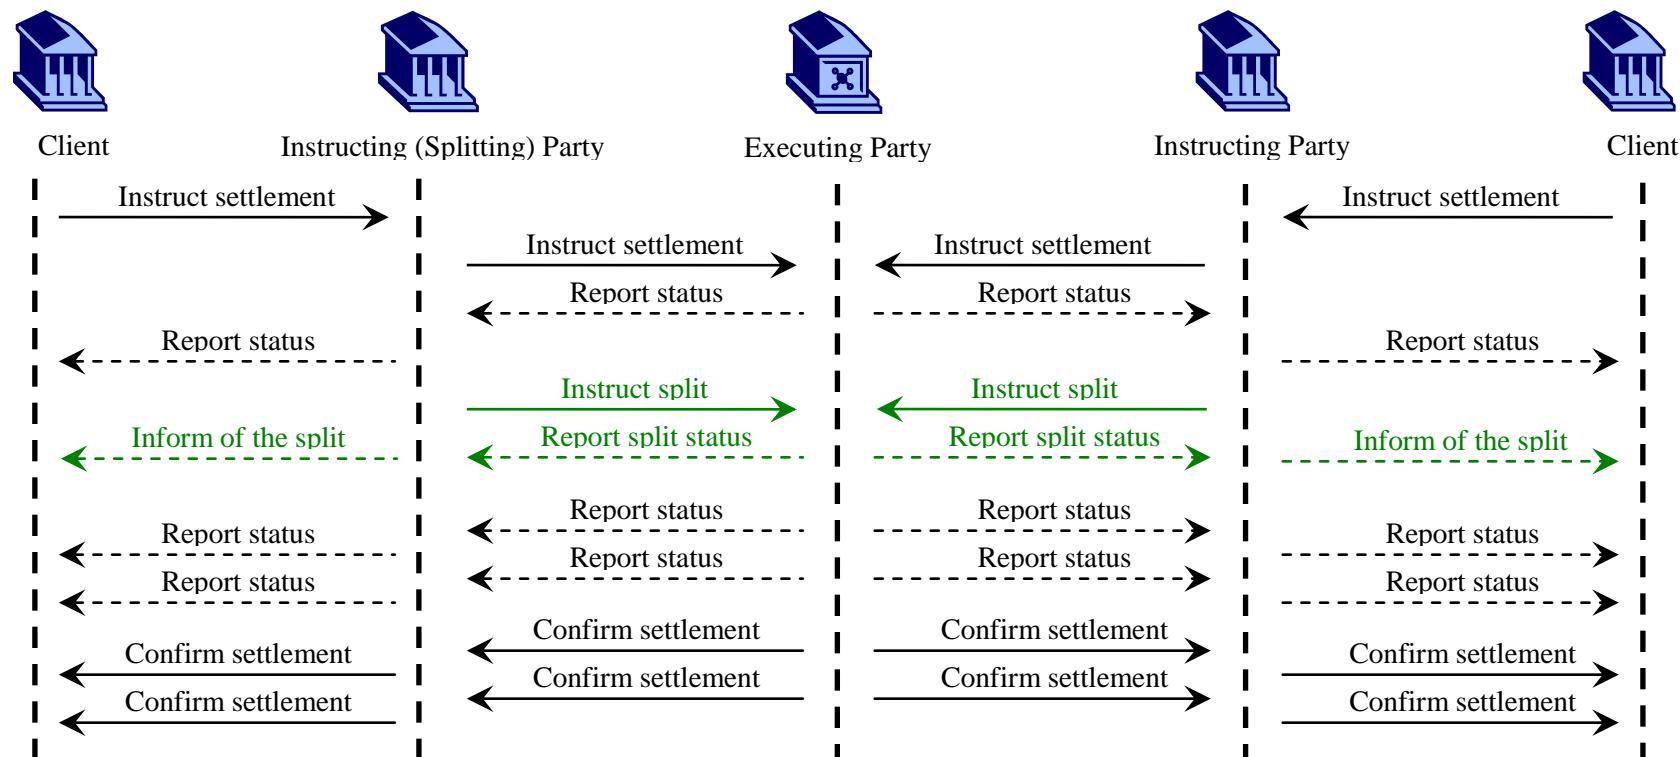

In green, the main communication requirements for this process.

In black, the surrounding communication needs.

In dotted line, the optional/potential communication needs.

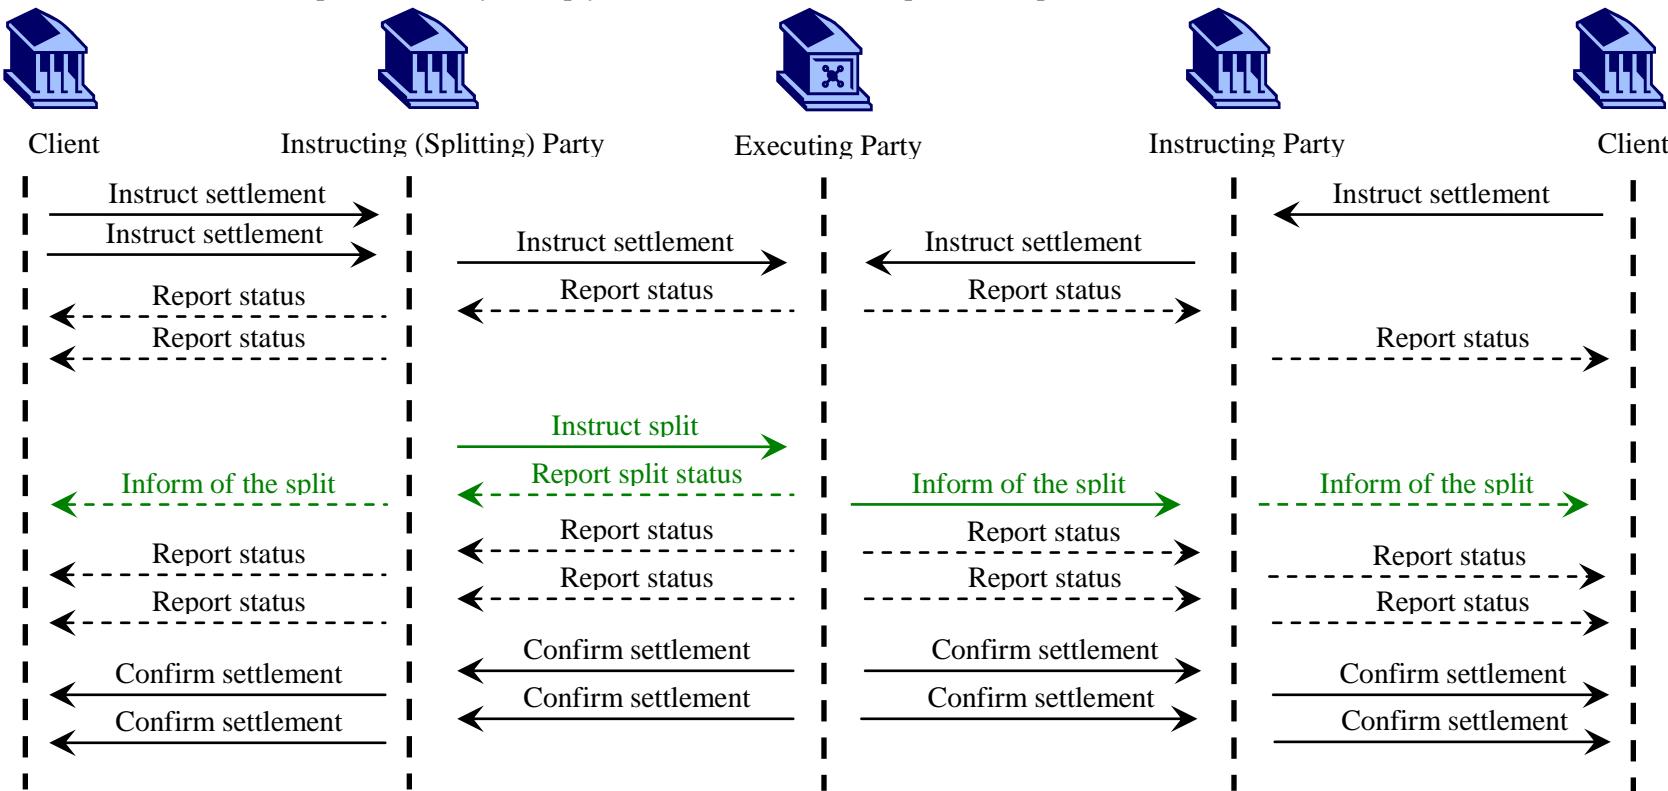

A. Bilateral splitting

This scenario described a bilateral split instruction where both parties have agreed to split (not in scope of this MP) need to instruct for the split to take place. The scenario illustrates a split in two shapes.

B. Unilateral splitting

This scenario described a split where only one cpty needs to instruct for the split to take place.

V. Business data requirements:

For each of the above-described different communication needs, the following business data are required.
Focus is on the split process.

1. Instruct split:

Business elements	Additional information
Reference to the original instruction being split.	
Calculated new quantities	
Calculated new amounts ¹	

2. Report split status:

Business elements	Additional information
Reference to the split instruction	Not to the original instruction, to the split instruction.
Status	Processing status of the split (done or not)

3. Inform of the split:

Business elements	Additional information
Reference to the original instruction being split.	
Information that the original instruction was split	
Information that the new instructions are created following a split	
New quantities	
New amounts	

VI. Market Practice Rules

Focus is on the splitting and subsequent reporting process.

The difference between bilateral splitting and unilateral splitting is that, for unilateral splitting, only one side of the trade will instruct. The other side will be informed of the split.

A. Instructing (splitting) party

1. From the instructing (splitting) party to the executing party

The instructing (splitting) party needs to cancel the original instruction and replace it with two or more new instructions.

Each new instruction will have its own unique identification to identify the transaction but for reconciliation purposes, it will also contain a reference back to the original (cancelled) transaction.

2. From the instructing (splitting) party to the client

1. Following confirmation by the executing party of the cancellation of the original settlement instruction, an instruction status is reported to the client with the following information:

- Reference to the original settlement instruction being cancelled.
- Status that the original instruction was cancelled due to a split

¹ This is not always the case (e.g. free of payment)

Split settlement MP

This will inform the client that the original instruction is being split.

2. Following confirmation by the executing party of the creation of the new instructions, one advice will be sent to the client for each instruction created with:

- Reference to the original instruction having been cancelled and replaced by two or more instruction.
- Status that new instructions have been created due to a split.

3. When the split instructions settle, each confirmation will be linked to the original instruction. Executing party

B. Executing party

The executing party needs to cancel the original instruction and replace it with two or more new instructions. All split transactions should eventually settle or be split down again to facilitate settlement.

Status reporting on the split process is recommended.

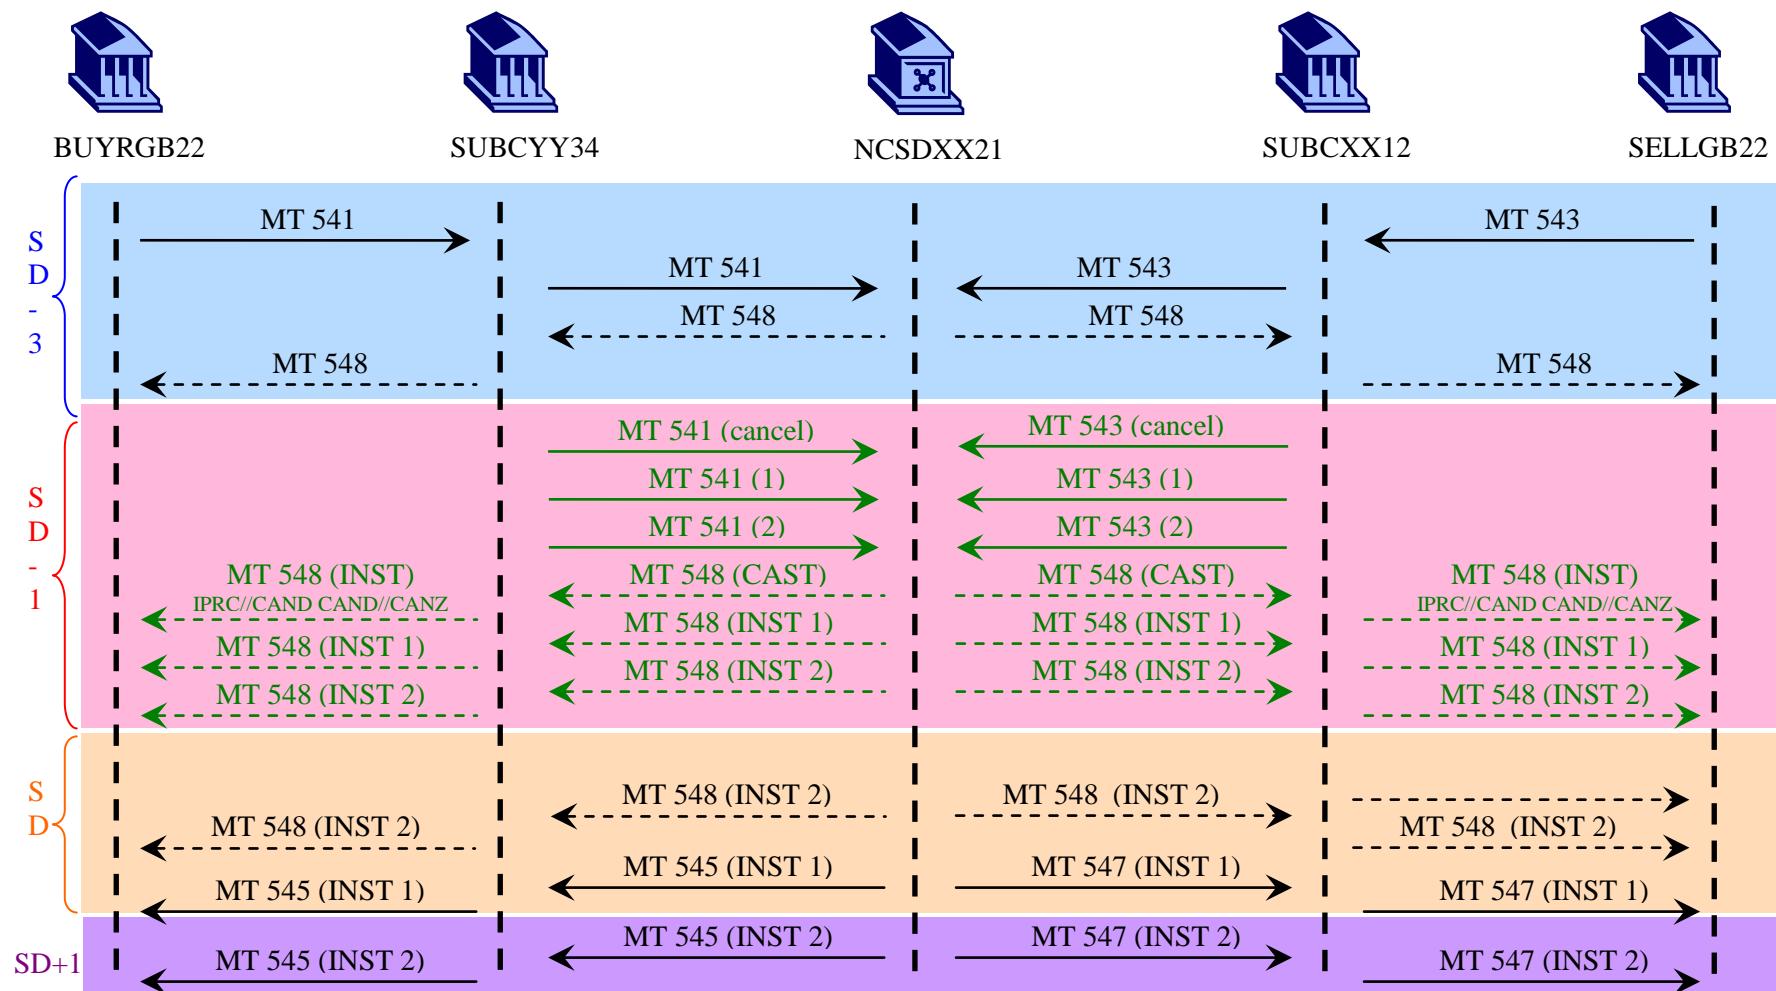

Settlement of each new split instruction will result in a settlement confirmation message being generated confirming the settled quantities and amounts of each split instruction.

VII. ISO 15022 Illustrations:

A. Bilateral Splitting

In this scenario, an instruction to deliver 5000 units of securities ABC from SELLGB22 to BUYRGB22 need to be split in two instructions to allow future settlement. **Due a position shortage, only 3000 units can settle on settlement date. The remaining 2000 units will settle on SD +1.**

After having agreed with the counterparty's agent (eg, clearing broker), the custodian and the broker split the transaction to be settled.

5. SD-1: Report status of cancellation and new instructions:

See market practice on status reporting (MT 548 MP).

6. SD: Settlement confirmation of split instruction 1.

On SD, split instruction 1 settles (i.e. the split instruction for 3000 units).

B. Unilateral Splitting

In a unilateral scenario, the cpty will be informed about the split but will not need to instruct. The cpty will be advised of the split.
 For message samples, see bilateral splitting

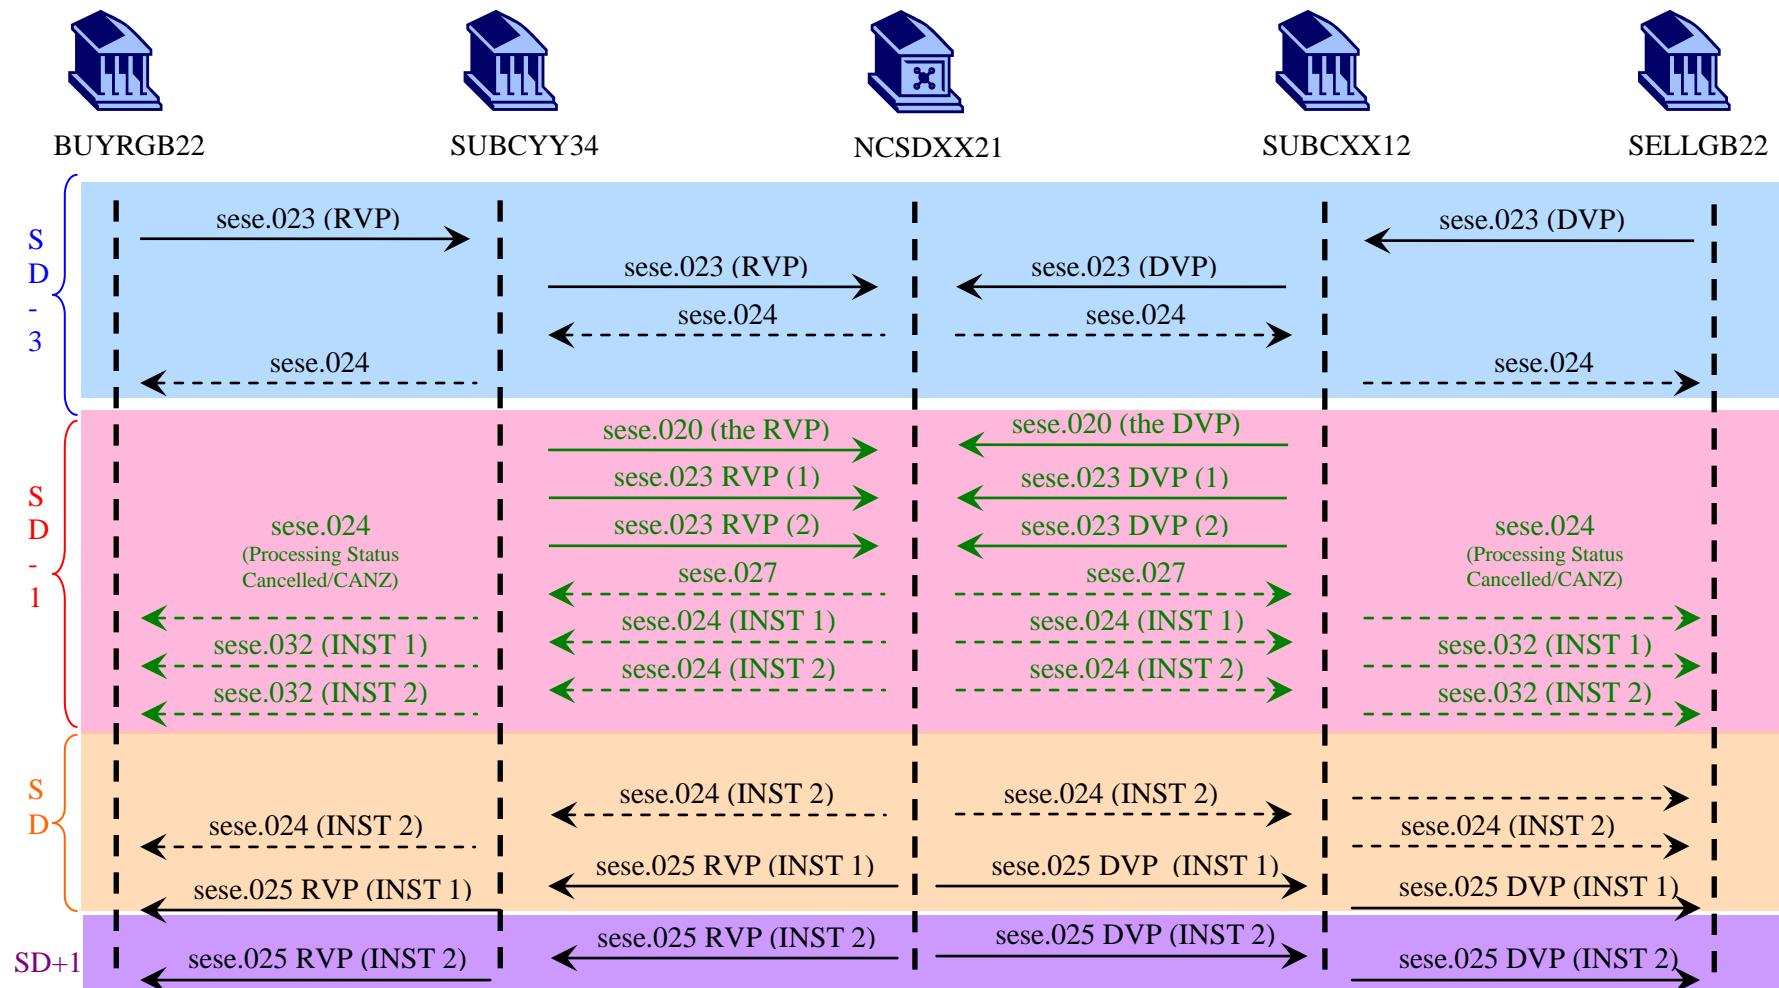

VIII. ISO 20022 Illustrations:

A. Bilateral Splitting

In this scenario, an instruction to deliver 5000 units of securities ABC from SELLGB22 to BUYRGB22 need to be split in two instructions to allow future settlement. **Due a position shortage, only 3000 units can settle on settlement date. The remaining 2000 units will settle on SD +1.**

After having agreed with the counterparty's agent (eg, clearing broker), the custodian and the broker split the transaction to be settled.

1. SD-3: Instruct settlement:

Note that the Message/Document identification and preparation time are included in the Business Application Header

B. Unilateral Splitting

In a unilateral scenario, the cpty will be informed about the split but will not need to instruct. The cpty will be advised of the split.

For message samples, see bilateral splitting
