Message Types

The following table lists all message types defined in this book.

For each message type, there is a short description, an indicator whether the message type requires authentication (Y/N), the maximum message length on input (2,000 or 10,000 characters), whether the use of the message requires registration with SWIFT for use in a message user group (Y) or not (N) and whether value date ordering (VDO) can be requested for the message (Y/N). Value date ordering criteria are described in the *Standards MT General Information*.

MT 548 Settlement Status and Processing Advice

MT 548 Scope

This message is sent by an account servicer (account servicing Institution) to an account owner or its designated agent. The account servicer may be a local agent (sub-custodian) acting on behalf of their global custodian customer, or a custodian acting on behalf of an investment management institution or a broker/dealer.

This message is used to advise the status of a settlement instruction previously sent by the account owner (the function of the message is INST).

The message may also be used to report on future settlement or forward transactions, for example, free receipts for which no instruction is required, which have become binding on the account owner.

The underlying instruction must be either a deliver or receive and be either free or against payment.

It is also used to reply to a cancellation request previously sent by the account owner (the function of the message is CAST).
