

- P17 top of section added verbiage - *For any Broker/Financial Institution field, when only a BIC is provided, the A tag must be used as SWIFT does not allow /ABIC/ in J format to appear by itself without another code present. Either A or J option is allowed when both BIC and Account number are present. If any other information is provided, then J format allows for multiple codes including Name, Address, Clearing Code, etc.*
- Updated Party fields in Swift examples throughout the document that A or J option could be used for BIC + Account. BIC alone is A format. Any other information included is with J option.
- p14 57J Changed /USFW/ to /CLRC/FW.

Items I did not make updates for.

- SWIFT removed D option from many fields. As MP did not have D option mentioned, I made no updates.
- SWIFT is still allowing /ABIC/ in J format although the preferred option is A if BIC is known. There were many samples that still have J with /ABIC/. I left those alone as it is still allowed as long as another J codeword is present. Let me know if you think otherwise.
- SWIFT did not change the E Sequence with respect to removing D option and addition of CLRC country codes as they did for sequence B1 and B2. I'm not sure if that was an oversight on SWIFT part as it seems a little inconsistent, but did not change Sequence E on MP to align with the current SWIFT documentation for 2019.

- SWIFT added Copy New, Copy Amendment, Copy Cancellation to 22A. As these seem related to notification of a third party and not a subcustodian, I left it out. Let me know if you think otherwise.
- Swift added TXID Tax Identification code and SVBY Fund or beneficiary servicing party to many fields. As I didn't see similar LEIC Legal Entity ID from previous SWIFT updates, I did not add TXID and SVBY.
